

# Fidelity Advisor Investment Grade Bond Fund - Class Z

Asset Class: Taxable Income

Current performance may be higher or lower than that quoted. Performance data shown represents past performance and is no guarantee of future results. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. See the end of this document for important performance information and definitions.

## Hypothetical Growth of \$10,000

As Of 03/31/2025

A hypothetical \$10,000 investment made in the fund ten years ago, or on commencement of operations for funds lacking a ten-year track record. Figures show monthly returns and include reinvestment of dividends and capital gains but do not reflect the effect of any applicable sales charges or redemption fees, which would lower these figures. This chart is not intended to imply any future performance of the fund.

## Details

NAV	\$7.18 as of 04/24/2025
POP (Public Offering Price)	\$7.18 as of 04/24/2025
30-Day SEC Yield	4.68% as of 04/23/2025
Daily Mil-rates	0.000799200 as of 04/24/2025
MTD Cum. Mil-rates	0.018976964 as of 04/24/2025
Weighted Avg Maturity	8.8 Years as of 03/31/2025
12 Month Low-High	\$6.95-\$7.46 as of 03/31/2025
Turnover Rate	232% as of 08/01/2024
Net Assets (\$M)	\$2,149.49 as of 03/31/2025
Portfolio Assets (\$M)	\$10,566.07 as of 03/31/2025
Morningstar Category	Intermediate Core Bond
Fund #	3251
CUSIP	31635T807
Fund Inception	08/06/1971
Share Class Inception	10/02/2018
Fiscal Year End	August

There is a contractual cap on the expenses borne by the fund, which indicates the maximum level of expenses (with certain exceptions) that the fund would pay; the respective contract expires on 12/31/2025. Net Assets reflect assets of the class shown; Portfolio assets reflect the assets of all classes of the same fund. For further detail regarding minimum investments, please see the fund prospectus.

## Expenses, Fees & Loads

Exp Ratio (Gross) - Prospectus	0.39% as of 10/30/2024
Exp Ratio (Net) - Prospectus	0.36% as of 10/30/2024
Exp Cap	0.36% as of 10/02/2018
Management Fee	0.28% as of 10/30/2024
Distribution and/or Service (12b-1) fees	0.00%

There is a contractual cap on the expenses borne by the fund, which indicates the maximum level of expenses (with certain exceptions) that the fund would pay; the respective contract expires on 12/31/2025.

## Investment Objective

Seeks a high level of current income.

## Strategy

Normally investing at least 80% of assets in investment-grade debt securities (those of medium and high quality) of all types and repurchase agreements for those securities. Investing in lower-quality debt securities. Engaging in transactions that have a leveraging effect on the fund.

## Risk

Fixed income investments entail interest rate risk (as interest rates rise bond prices usually fall), the risk of issuer default, issuer credit risk and inflation risk. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. Lower-quality bonds can be more volatile and have greater risk of default than higher-quality bonds. Leverage can increase market exposure and magnify investment risk.

## Morningstar Ratings

AS OF 03/31/2025 ; Morningstar Category: Intermediate Core Bond

Overall	★★★★★	Out of 422 funds
3 Yr	★★★★★	Out of 422 funds
5 Yr	★★★★★	Out of 380 funds
10 Yr	★★★★★	Out of 276 funds

The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating metrics, which are based on risk-adjusted returns. Past performance is no guarantee of future results.

Yields and Distributions

#### Important Investment Policy Changes

Prior to 6/1/17, FA Global Credit fund was named FA Global Bond fund, operated under certain different investment policies and compared its performance to a different benchmark. The fund's historical performance may not represent its current investment policies.

Prior to 6/1/17, FA Simplicity RMD and Managed Retirement Funds were known as FA Income Replacement Funds and operated under certain different investment policies. The fund's historical performance may not represent its current investment policies.

Returns shown for MSCI U.S. IMI Financials 5% Capped Index for the periods prior to September 1, 2016 are returns of MSCI U.S. IMI Financials 25/50 Index; returns shown for periods prior to January 1, 2010 are returns of the MSCI U.S. IM Financials Index.

Prior to 6/1/11, 2/1/07, 1/29/02, 9/1/00 and 7/1/99, respectively, FA Global Strategies, FA Growth Opportunities, FA Strategic Growth, China Region (the original class of FA China Region) and FA Value Strategies operated under certain different investment policies and compared their performance to different benchmarks. Prior to 10/1/04 and 12/1/07, International Discovery and Mega Cap Stock Funds (the original classes of FA International Discovery and FA Mega Cap Stock), respectively, operated under certain different investment policies. These funds' historical performance may not represent their current investment policies.

Prior to 10/1/06, FA Consumer Discretionary, FA Industrials, FA Communications Equipment, FA Utilities and FA Energy were named FA Consumer Industries, FA Cyclical Industries, FA Developing Communications, FA Telecommunications & Utilities and FA Natural Resources, respectively; operated under certain different investment policies and compared their performance to different secondary benchmarks. The funds' historical performance may not represent their current investment policies.

Prior to 10/30/13, FA Limited Term Bond Fund was named Fidelity Advisor Intermediate Bond Fund, and operated under different investment policies. The fund's historical performance may not represent its current investment policies.

Prior to 12/1/18, FA Communications Services operated under certain different investment policies and compared its performance to a different benchmark. The fund's historical performance may not reflect its current investment policies. Index returns shown for the period January 1, 2010, to November 30, 2018, are returns of the MSCI U.S. IM Media 25/50 Index. Index returns shown for periods prior to January 1, 2010, are returns of the MSCI U.S. IM Media Index.

#### Additional Information

The Morningstar Rating™ for funds, or "star rating," is calculated for funds with at least a three-year history. (Exchange traded funds and open-end mutual funds are considered a single population for comparative purposes.) It is calculated based on a Morningstar risk-adjusted return measure that accounts for variation in a fund's monthly excess

performance (excluding the effect of sales charges, if any), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each fund category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. Morningstar Rating is for the indicated share class only; other classes may have different performance characteristics. 2016 Morningstar, Inc. All rights reserved. The information contained herein: (1) is proprietary to Morningstar and/or its affiliates; (2) may not be copied or redistributed; (3) is not warranted to be accurate, complete, or timely. Third-party trademarks and service marks are the property of their respective owners. All other trademarks and service marks are the property of FMR LLC or an affiliated company.

It is not possible to invest directly in an index. All indices are unmanaged.

If applicable: *StyleMaps* estimate characteristics of a fund's equity holdings over two dimensions: market capitalization and valuation. The percentage of fund assets represented by these holdings is indicated besides each StyleMap. The position of the most recent publicly released full holdings is denoted on the StyleMap with a dot. Historical StyleMap characteristics are calculated for the shorter of either the past three years or the life of the fund, and are represented by the shading of the box(es) previously occupied by the dot.

Definitions

**Alpha-Annualized** A risk-adjusted performance measure. A positive (negative) alpha indicates stronger (poorer) fund performance than predicted by the fund's level of risk (measured by beta). Alpha is annualized. **Annualized Tracking Error** Measures how closely the fund's returns have tracked an index historically. It is defined as the standard deviation of the monthly differences between the fund return and the index return, over a 36 month rolling time horizon. **Annualized Turnover Rate** is the lesser of amounts of purchases or sales of long-term portfolio securities divided by the monthly average value of long-term securities owned by the fund. **Average Annual Total Return** A hypothetical rate of return that, if achieved annually, would have produced the same cumulative total return if performance had been constant over the entire period. Average annual total returns smooth out variation in performance; they are not the same as actual year-by-year results. **Beta** A historical measure of a fund's sensitivity to market movements and is calculated by comparing the fund's monthly returns, over 36 months, to those of the market, defined by the fund's benchmark. By definition, the Beta of the market (as measured by the benchmark) is 1.0. A Beta of less than 1.0 indicates that the fund is less sensitive to the market, while a Beta of more than 1.0 indicates that the fund is more sensitive to the market. The higher the correlation between the fund and the market (as measured by R-squared), the more meaningful is Beta. **Bond Quality** A measure of the quality and safety of a bond, based on the issuer's financial condition. More specifically, an evaluation from a rating service (i.e. Moody's, S&P) indicating the likelihood that a debt issuer will be able to meet scheduled interest and principal repayments. Typically, AAA is highest (highly unlikely to default) and D is lowest (in default). Bonds rated BB or below are not capital Investment Grade which means that under most state laws, institutions that invest other people's money may not buy them. **Downside Volatility** Measures the volatility of a fund's returns below a minimum accepted level; calculated as the standard deviation of a fund's under-performance relative to the benchmark. **Exp Ratio (Net) – Prospectus** Expense ratio is a measure of what it costs to operate an investment, expressed as a percentage of its assets, as a dollar amount, or in basis points. These are costs the investor pays through a reduction in the investment's rate of return. For a mutual fund, the gross expense ratio is the total annual fund or class operating expenses directly paid by the fund from the fund's most recent prospectus after any fee waiver and/or expense reimbursements that will reduce any fund operating expenses. This ratio also includes Acquired Fund Fees and Expenses, which are expenses indirectly incurred by a fund through its ownership of shares in other investment companies, This number does not include any fee waiver arrangement or expense reimbursement that may be terminated without agreement of the fund's board of trustees. If the investment option is not a mutual fund, the expense ratio may be calculated using methodologies that differ from those used for mutual funds. **Exp Ratio (Gross) – Prospectus** Expense ratio is a measure of what it costs to operate an investment, expressed as a percentage of its assets, as a dollar amount, or in basis points. These are costs the investor pays through a reduction in the investment's rate of return. For a mutual fund, the gross expense ratio is the total annual fund or class operating expenses directly paid by the fund from the fund's most recent prospectus (before waivers or reimbursements). This ratio also includes Acquired Fund Fees and Expenses, which are expenses indirectly incurred by a fund through its ownership of shares in other investment companies. If the investment option is not a mutual fund, the expense ratio may be calculated using methodologies that differ from those used for mutual funds. **Option Adjusted Duration** Shows how much a bond's price fluctuates with changes in comparable interest rates. The duration figures shown are FMR's estimates of the fund's option-adjusted effective durations, based on the dollar-duration of the portfolio as a whole. **Portfolio Diversification** Diversification of fund assets by asset class/investment type based on total net assets. **Relative Volatility** A fund's relative volatility is a ratio that compares the fund's volatility to the volatility of a benchmark index, such as the S&P 500 Index. By definition, the benchmark has a relative volatility of 1.0. A fund with a relative volatility greater than 1.0 has had returns that have been more variable than those of the benchmark index, while a fund with a relative volatility less than 1.0 would have had less volatility than the benchmark index. **R-Squared(R2)** An historical measurement, calculated over 36 months, which indicates how closely a fund's fluctuations correlate with the fluctuations of its appropriate benchmark index. An R2 of 1.00 indicates perfect correlation, while an R2 of 0.00 indicates no correlation. **SEC Yield** The fund's 30-day yield is based on yield to maturity of a fund's investment and not on the dividends paid by the fund, which may differ. Tax-equivalent yields for the municipal funds are based on highest combined federal and state tax rates. The fund's 7-day yield is an annualized historical yield calculated on the date shown based on the preceding seven days' level of income earned by the fund. **Sharpe Ratio** is a measure of historical adjusted performance calculated by dividing the fund's excess returns (fund's average monthly returns minus the average monthly return of the Salomon Smith Barney 3-Month T-Bill Index) by the standard deviation of those returns. The higher the ratio, the better the fund's return per unit of risk. **Standard Deviation** A statistical measurement of the dispersion of a fund's return over a specified time period. Fidelity calculates standard deviations by comparing a fund's monthly returns to its average monthly return over a 36-month period, and then annualizes the number. A higher standard deviation indicates a wider dispersion of past returns and thus greater historical volatility. **Weighted average maturity** is a weighted average of all the maturities of the securities held in a fund. WAM can be used as a measure of sensitivity to interest rate changes and markets changes. Generally, the longer the maturity, the greater the sensitivity to such changes. WAM is based on the dollar-weighted average length of time until principal payments must be paid. Depending on the types of securities held in a fund, certain maturity shortening devices (e.g., demand features, interest rate resets, and call options) may be taken into account when calculating the WAM.

Before investing, consider the funds investment objectives, risks, charges, and expenses.
